

SaaS Alerts

Purpose built for MSPs to protect and monetize customer SaaS applications.

The SMB technology landscape has evolved and unfortunately so have cybersecurity threats. These threats come from external and internal sources, they find holes in networks and also infiltrate through the Software as a Service applications that your customers use every day to run their businesses.

It's Time to Roll Out an Additional Layer of Protection for Your Customers.

One that's specifically aimed at covering SaaS applications. This new service will protect any employee or contractor within a company's domain logging into any of the world's most popular SaaS applications.

Leveraging specialized software, SaaS application alerts will be surfaced to your helpdesk engineers for remediation.

Constant, real-time monitoring facilitates application hygiene necessary for proper end user protection in an evolving landscape.

Integrates with your existing PSA. Instantly create tickets within your PSA console, allowing for faster response.

Visit SaaSAlerts.com to sign up for your Free Trial and start protecting your customers' SaaS Application environments while generating additional revenue.
